Patient

Kahn Test

NEGATIVE

Dear Doctor:—

Above is the result of the Kahn Test for syphilis on the  
blood specimen recently submitted by you.

S

Very truly yours,

*Howard J. Shaughnessy*  
Bacteriologist

Lab. 10

(A6393—50M—9-39)

(OVER)

## INTERPRETATION OF KAHN REACTION

Reactions previously reported as four, three or two plus are now reported as positive.

1. A positive reaction suggests syphilis. Any serologic reaction, however, should be interpreted in the light of clinical findings.
2. The term "doubtful" is now used to designate reactions which were previously reported as one plus or doubtful. A "doubtful" reaction should not be considered diagnostic in the absence of clinical signs. Such a reaction is given on rare occasions by healthy individuals. Reports of "doubtful" should be checked by the submission of additional specimens.
3. A negative reaction does not eliminate the possibility of syphilitic infection. Such a reaction is frequently obtained in early primary and occasionally in other stages of syphilis.
4. Spinal fluid examinations are advised in all cases suggestive of cerebro-spinal syphilis. Blood specimens in such cases occasionally give negative reactions.
5. If laboratory findings do not confirm clinical findings in a given case, it is suggested that additional specimens be sent for check examination.
6. The Kahn precipitation test has the advantage over the Wassermann test of simplicity. It has the further advantage of giving reliable readings with specimens that are anti-complementary or otherwise unsuitable for the Wassermann test. Experiences in these laboratories show that the Kahn test and Wassermann test check in about 98% of the cases.

WASSERMANN AND GONORRHEA FIXATION TESTS ARE ONLY PERFORMED AT OUR MAIN LABORATORY IN SPRINGFIELD AND THE CHICAGO BRANCH LABORATORY. IF THESE FIXATION TESTS ARE DESIRED, PLEASE SUBMIT SPECIMENS TO ONE OF THE ABOVE LABORATORIES.
